Greg and Warren,

Please find attached the preliminary mission report 3 for 1 July 2011. No significant rad or chemical detections. Trace detections of ozone, formic acid, methanol and ammonia, all consistent with wood smoke.

We have both aerial and ir images which will be provided in a subsequent data set.

The aircraft is currently refueling in Taos and will return to Santa Fe by 1430.

We will continue to look at data. Let me know if you have any questions.
